

Conformable Safety-Grip™

For application on uneven surfaces such as durbar tread and chequer plate.

- Aluminium foil backing has no memory so conforms to surfaces
- Reduces risk of lifting from uneven surfaces

A foil base gives Conformable Safety-Grip™ high flame retardancy levels. The product has been tested and certified to CAA FAA specification 8 for use within aircraft cockpit areas. Conformable Safety-Grip™ also has R118 certification for the burning behaviour of materials used in the construction of commercial vehicles. (see website to download the certificate)

Mild Abrasive Safety-Grip™

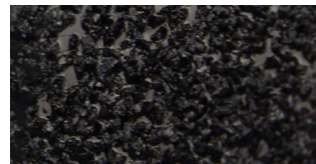

H3432N
Black

Small granules give a low peak to valley profile resulting in a gentle feel and adequate slip prevention in the right environments.

- Lightest, thinnest abrasive anti-slip tape
- Internal and external application
- Water resistant

PeakGrip

H3456N
Black

Provide a permanent grip surface to areas frequently exposed to mud and water. Liquids flow away due to the tape's ingenious large, well-spaced grit structure.

- Surface consists of big chunky granules

RigiGrip

H3481N
Black

RigiGrip is standard Safety-Grip™ with a thicker backing liner giving it more rigidity and making it easier to apply in large sheets.

- Backing liner 50% thicker than standard Safety-Grip™
- More rigid for large sheet application
- 60 grit anti-slip surface
